Person 1 — Computer Vision

- Integrate MediaPipe Pose and Hand Landmarker.
- Establish a normalized torso coordinate system.
- Map estimated hand positions to predefined zones.
- Track approximate dwell time and handle temporary tracking loss.
- Return estimated coverage data to Person 2.

Person 2 — Frontend and Guided Experience

- Build onboarding, consent, and home screens.
- Create the avatar and interactive zone template.
- Implement guided steps, voice instructions, and gap prompts.
- Integrate Person 1's tracking module.
- Display findings and history supplied by Person 3.

Person 3 — Data, History and Reporting

- Design the local data schema and IndexedDB operations.
- Implement the findings log and monthly timeline.
- Add transparent persistence indicators.
- Generate the consultation PDF with jsPDF.
- Test data retention, privacy, and report accuracy.

- Step 1 — Person 2
- Builds the avatar, zone IDs, and guided routine.
- Step 2 — Person 1
- Receives the zone template and maps camera-estimated hand positions to those zones.
- Step 3 — Person 2
- Displays estimated coverage, tracking limitations, and prompts to revisit potentially missed zones.
- Step 4 — Person 3
- Stores the user's findings, dates, locations, and notes locally.
- Step 5 — Persons 2 + 3
- The timeline displays saved observations, and the PDF generator creates a clinician summary.
- Step 6 — User
- Reviews the report and chooses whether to share it with a healthcare professional.
